## Medical IT Trolley **AMT160**

### **Ergonomic and Configurable Mobile Workstation**

The Athena AMT160 is an ergonomic and compact Medical IT Trolley designed for environments where space is limited but flexibility and comfort remain essential. Featuring manual, hand-operated height adjustment, the AMT160 supports comfortable seated and standing workflows while offering a smaller footprint compared to larger trolley models.

Built with the same robust and reliable design philosophy as the AMT200, the AMT160 delivers stable mobility and dependable performance in daily use. Its modular configuration allows integration of essential accessories, work surfaces, and IT components, making it a practical solution for smaller rooms, narrow corridors, and departments that require an ergonomic IT trolley without the need for motorized height adjustment.
