OR Wall PC's

Operating Room Panel – 43 inch

The Athena 43-inch Operating Room Panel (OF43MP) is designed to deliver clear, reliable information exactly where it is needed most—inside the operating room. Combining a large-format medical-grade display with integrated computing power, this panel supports complex surgical workflows while maintaining a clean, calm, and organized environment.

Available as wall-mounted or in-wall integrated, the OF43MP fits seamlessly into modern OR designs. The 43-inch UHD display provides excellent visibility for imaging, patient data, and system information, while alternative sizes of 36 or 52 inches allow the solution to be tailored to different room layouts and clinical preferences. Dual-monitor configurations are also available for advanced visualization needs.

Built to medical standards and developed according to Dutch design principles, the OF43MP can be configured with PCAP touch or hardened anti-glare glass, an integrated foldable keyboard and mouse platform, and extensive connectivity for external monitors and video recording systems. Its service-friendly design and custom-build options make it a future-proof solution for operating rooms where reliability, hygiene, and integration are essential.
